OUR SOILS WERE NOT ALWAYS DEFICIENT IN MINERALS

When dinosaurs were here 70 million years ago, they were probably roaming an earth abundant with at least 84 minerals in the soil. A time when plants and fruits likely contained at least 77 minerals which became water-soluble as they transmuted through the root system to become part of a luscious, succulent, vibrant, life-sustaining food. Plant derived minerals have been encapsulated in the earth as a pure food since that time. Each liter of **Strawberry Kiwi-Mins™** contains a natural assortment of plant derived minerals which range from A to Z on the mineral list. These minerals are leached from ancient humic shale mined from Southern Utah.
